

# PROJECT PROPOSAL

---

## PROJECT RULES

1. Follow the guidelines and timelines.
2. 2-3 members are allowed in a group.
3. Plagiarized/copied submission would be marked 0.
4. Same project idea would not be accepted twice.

## LEARNING OBJECTIVES

- Creation of full-fledged Management System application with as a Web Application.

## PROJECT IDEA

The Tour Management System (TMS) is a comprehensive web-based application designed to streamline and automate the process of managing tours, travel bookings, and itinerary planning. This system is developed to cater to the needs of tour operators, travel agencies, and travelers alike, offering a user-friendly interface and a range of features to enhance the tour management experience.

## Purpose of the System

The primary purpose of the Tour Management System is to simplify the management of tours and travel activities. It aims to provide tour operators with a centralized platform to manage all aspects of their tours, including itinerary creation, booking management, customer communication, and financial tracking. For travelers, the system offers an easy way to browse and book tours, customize their itineraries, and receive updates and notifications about their travel plans.
